

Preemie Muffs™

Premature Neonatal Ear Covers

Protecting our smallest patients from acoustic noise in the NICU

It is now known that loud noises can negatively impact on physiological parameters such as blood pressure, breathing, heart beat and oxygen saturation. When exposed to loud noises, a baby's sleep is interrupted, which then increases stress and energy consumption, which means less energy is used for growth and development.

In the neonatal intensive care unit and during transportation, a premature baby is exposed to a variety of noises. The Parker Neocare Preemie Muffs™ are the safe and comfortable way to provide hearing protection from noises that are generated from:

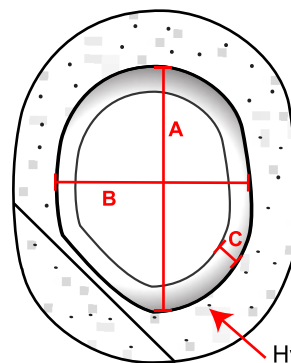

- Ventilation machines or open care systems
- External and Internal transfers
- During procedures, such as cardiac echoes
- Acoustic noises from the Neonatal Nursery when incubator doors are open or when the neonate or infant is outside the incubator

Preemie Muffs™ are the safe and comfortable way to provide hearing protection for premature babies. They are commonly used within loud environments in the neonatal nursery and during transportation.

Part Number: **MP-EM200**

Quantity: One (1) Pair /Pack
Twenty-five (25) Pairs / Box

Approximate Dimensions

A	Inner Length	37.5 mm
B	Inner Width	28.3 mm
C	Inner Height	7.0 mm

Non-Sterile

Instruction for Use (IFU)

Keep dry

Do not reuse

Keep away from sunlight

Caution

DEHP FREE

Medical Device

Not made with natural rubber latex

Do not use if damaged or open

* Product subject to change without notice
